YP-2100B

The YP-2100B Infant Incubator is a compact, integrated neonatal care platform combining advanced thermoregulation with optional multi-parameter monitoring to deliver a complete NICU solution.

Product Features:

- 12.1-inch LCD color touch screen, night mode can be set and 90° rotatable according to clinical needs;
- **Three temperature servo control:** air mode, baby mode, and kangaroo mode can be selected as an optional configuration
- The updated PID core algorithm makes the temperature fluctuation in the incubator more stable;
- The scientific design of 270° warm air inhalation mode creates an advanced air
- circulation system
- Configured with humidity concentration control function, and the oxygen concentration control function can be selected as an optional configuration
- Equipped with an external humidification water bag to reduce contact with external air, and use high temperature steam humidification to inhibit the growth of bacteria
- The humidification water tank made of Teflon material, combined with the self-cleaning and self-disinfection mode, saves more maintenance costs
- One-button electric control bassinet can be adjusted smoothly and tilted at multiple angles, optional bassinet angle display function equipped with weighing system
- The height of the whole machine can be adjusted from both sides to meet the operations of medical staff with different heights (Optional)
- Masimo Rainbow SpO2 pulse oximetry function to measure blood oxygen and pulse effectively during motion and low perfusion* (Optional)
- ECG, Sun Tech NIBP, Hemoglobin, Masimo CO2 and apnea wake-up. (Optional)
