YP-2800B

The YP-2800B Infant Incubator integrates incubating and neonatal monitoring functions to provide a comprehensive NICU solution for premature and low birth weight infants.

Product Features:

- 10.4-inch TFT color LCD touch screen, night mode can be set
- **Temperature servo control:** air mode, baby mode and kangaroo mode
- Equipped with an embedded intelligent control system and an Android display system, the updated PID core algorithm makes the temperature fluctuation in the incubator more stable
- Configured with humidity concentration control function and the oxygen concentration control function
- High-temperature steam humidification is used to create a bacteriostatic environment in the incubator; the front transparent water tank is convenient for cleaning and disinfection without dead ends
- One-button electric control bassinet can be adjusted smoothly and tilted at multiple angles, optional bassinet angle display function equipped with weighing system
- The height of the whole machine can be adjusted from both sides to meet the operations of medical staff with different heights
- Masimo SpO2 pulse oximetry function to measure blood oxygen and pulse effectively during motion and low perfusion* (Optional)
- Configurations can be selected such as ECG, Sun Tech NIBP, Hemoglobin, Masimo CO2 and apnea wake-up. (Optional)
